

IN ANOTHER DIMENSION

Paul Debevec, associate director for graphics research at the Institute for Creative Technologies, has been named one of the seven most important pioneers in the history of computer graphics imagery by *3D World* magazine.

An article credited Debevec for developing many of the techniques behind high dynamic range imaging and image-based lighting. It also mentioned his current research on face scanning and 3-D teleconferencing.

Paul Debevec

One of the other innovators on the list was **George Lucas '66**, who has been influential in the fundamental leaps in computer-generated imagery.
